MASSETIC STOP4

Reduce Duration and increase efficiency of STO projects with SAP certified solution.

MASSETIC STOP4

Plan, Execute, Report STO projects in Native SAP tool.

STOP4, the SAP UI5 based application is a one stop solution for all turnaround project needs. Developed on Fiori architecture STOP4 works seamlessly across various SAP modules.

Key Features

Comprehensive Scoping / Budgeting

STO planners can prepare worklist from scratch, templates or based on past STOs. Flexible approval process with realtime budgets from SAP can help in finalization of the scope with ease.

Planning with Integrated Resource Management

STOP4 makes planning much easier with real time native SAP based material and other resources management. Planners can create PRs and POs in SAP with just a few clicks. Planners can assign task list, material and service requirements, roles, design documents etc.

Scheduling with a powerful Gantt Chart

Work Order scheduling is made easier with multiple features like resource assignment, holiday management, overlapping resources, load level clarity. Mass updates reduces planners' efforts. Powerful Gantt Chart displays information from SAP and supports drag/drop for scheduling.

Execution supported with mobile Add On

Work order status can be updated by technicians and maintenance incharge real time. This provides transparency on the progress, material consumption and multiple critical path. Alerts on deviations as well as availability of resources and PRTs provide agility to the execution team.

Reports and dashboards

Several reports are available for planning, execution and post execution phase. Some of the reports include project comparison across different plans/plants. Customers can design their own reports and dashboards.

HIGHLIGHTS

Completely Within SAP

STOP4 brings tremendous advantages to the project team as it is built within SAP with no middleware requirement. It can seamlessly work with SAP ECC or S/4 HANA and leverages existing SAP configurations be it HR, EHS, PM, PS...

Easy to use & Configurable

A powerful Gantt Chart and SAP UI5 helps in ease of usage. It is designed for quick learning with low training efforts. It can be configured and customized as per customer's specific processes.

Manage High complexity with ease

The solution is highly scalable. It supports tens of thousands of activities & resources and provides seamless user experience for SAP users.

Mobile Support

The powerful mobile add on supports immediate updation of tasks, confirmation, checking material & PRT's availability, approval and update on measurement points. Permit systems can be integrated with mobile Add-on.

Low TCO

The solution is easy to maintain as it is SAP based with no middleware & no additional tool requirements.

Turnaround Readiness Score

Comprehensive and configurable scores based on multiple parameters to understand the readiness status to start the STO.

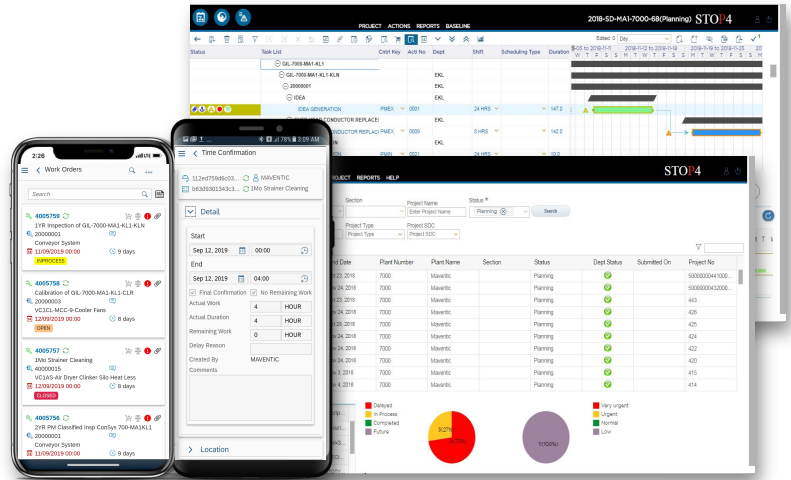

Baseline Management

Powerful baseline management with complete transparency on deviations helps in execution and re-planning.

Architecture & Value Proposition

Fiori Architecture for unique powerful solutions

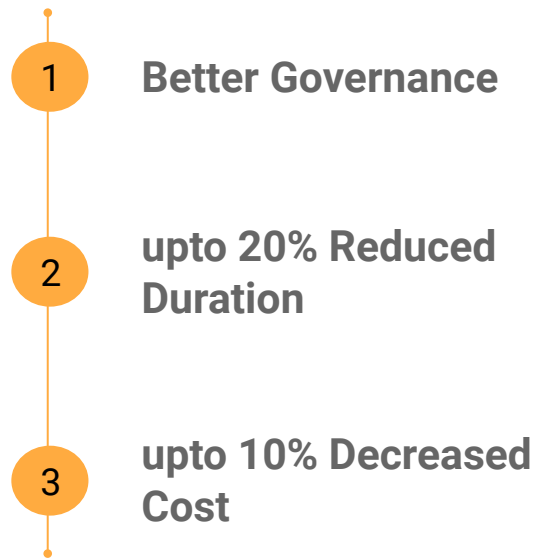

Massetic STOP4 brings complete STO planning and execution within SAP by leveraging SAP Fiori architecture. It is designed for SAP ECC and S/4 HANA and seamlessly works with existing SAP configurations be it SAP HR, EHS, PM, PS. The architecture ensures that there is no duplication of data, processes and workflows. It eliminates need of costly integration between SAP and third party planning tools. The reports and alerts coming from SAP helps in STO team to act in the moment and provide tremendous agility
